

Exterior Refinishing Project

Location: Overland Park,
Kansas

Type of Surface: Precast

Office building exterior was deep cleaned for improved health and safety of the occupants and fresh appearance.

Problem: Build-up of outdoor pollutants and other biological growth caused dark staining of the facility's exterior.

Solution: KC Restoration performed deep exterior cleaning services to restore this weathered façade to a fresh and rejuvenated look. Dirt, pollution, and biological staining were removed while protecting the surrounding vegetation.
